

The right journal
behind your research

Fast track review for young limnologists

PhD or Masters students who act as corresponding authors for a manuscript submitted to the **Journal of Limnology** can apply for fast-track review: a first decision, including a round of peer review, will be given as soon as possible, surely **within three weeks**.

Follow the instructions on
<https://www.jlimnol.it/index.php/jlimnol/about/submissions>
and opt for 'Fast track for students', adding a letter from your supervisor certifying your status as Masters or PhD student.

Benefits for our authors

Higher and faster visibility - Articles published in the **Journal of Limnology** are Open Access, giving a number of advantages for the widest dissemination, visibility, and impact of your research.

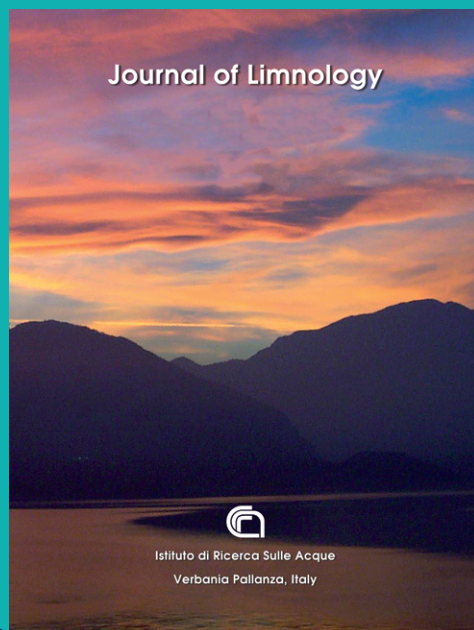

Wider impact - Thanks to a permissive license like CC BY, scientists and scholars are endowed to make progress on existing researches, thus facilitating the generation of new data.

Global spread - Article level metrics for each article show your research impact on the

journal site and provide understandings in the ways people interact with your research in the online environment. Usage, citation and social sharing data can be viewed directly on the article page.

Early publication - Just accepted articles are posted online before print publication and can then be cited with their unique DOI number, giving benefits of immediate distribution and promotion to our authors.

True publishing cost - Open Access publishing does have its cost, and this is the only cost we charge; our authors are able to find the current costs in our journal before submitting a manuscript. The **Journal of Limnology** publishing fee is one of the lowest in the OA scenario.

Journal of Limnology

Istituto di Ricerca Sulle Acque
Verbania Pallanza, Italy

The **Journal of Limnology** publishes peer-reviewed original papers, review papers and short communication about all aspects of limnology. The scope of the **Journal of Limnology** comprises the ecology, biology, microbiology, physics, and chemistry of freshwaters, including the impact of human activities, management and conservation.

Coverage includes molecular-, organism-, community-, and ecosystem-level studies on both applied and theoretical issues.

Impact Factor: 1.673
5-Year Impact Factor: 1.803
